

TIPS FOR PARENTS

Electrical Safety at Home

No shock is a safe shock.

Even low-voltage shocks can have serious long-term after-effects

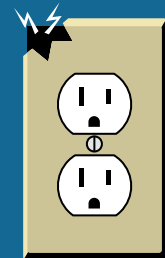

Build it right.

Hire only a Licensed Electrical Contractor for electrical work.

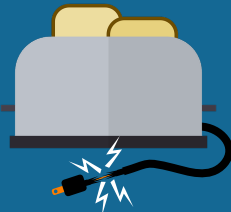

Replace broken or missing outlets and cover plates

Outlet covers create a barrier between kids and exposed wires.

Replace all frayed cords.

Tape won't protect kids from shock.

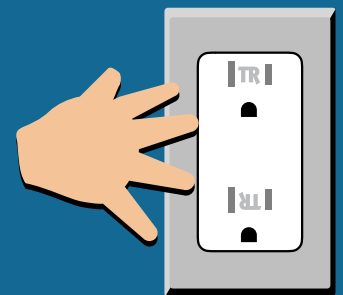

Be an electrical safety role model.

Show them how to use electrical devices and appliances safely.

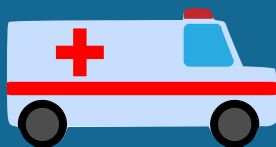

Install child-safety outlets (tamper resistant receptacles).

They help prevent little fingers or objects from going into the outlet.

If your child has been electrically shocked, get medical help.
